Some of the Super Commanders from that era that I would want to be a part of my favorite Sci-Fi universe. I prefer the Captain Nickolai Torme, who is the Commander on the U.S.S. Normandy. Sci-Fi history buffs will remember that the U.S.S. Normandy was called a "Super-Command" ship that was available in the late 40's and early 50's. This was the preferred choice for the Navy Officers when Commander James T. Kirk took over the command of the U.S.S. Enterprise, NCC-1701-D. The ship was designed by Joe Kaminski, who was the Director of Ship Modeling for the Zane Grey Studios. The ship was developed for 20th Century Fox Studios and it is famous as the first Captain Kirk's ship. But in the fictional universe of Star Trek, the ship can be called a super command ship that can exceed Warp Speed of 11,000,000,000 (That's 11 billion meters a second) in order to capture Borg V. And it was also one of the first sci-fi ships that had a Transporter. The ship can take on a number of different missions depending on what the situation is. In the last episode of the original series, when the U.S.S. Enterprise discovers a remnant of an advanced civilization. The captain tells Kirk to deploy the Super-Command ship and the U.S.S. Paris to destroy the remnants of the civilization. One of the crew members on the ship believes that this is no longer necessary because they had managed to wipe out the alien race. However, Kirk and his crew have a different interpretation.
