[FULL] Sta4cad V13

December 12, 2012 - STA4-CAD v13.1 is a software designed to design structures with the goal of determining the safety and design of a building under static load, seismic resistance. The program is intended for the development of construction drawings, including: slabs, columns, beams, ties, trusses, racks, foundations, load-bearing structures. When designing these elements, tools such as surface modeling, beam modeling, column modeling, truss modeling, and stud modeling can be used. The software provides construction drawings that are part of the structural design program.
