Official website: A: Default Printer or print spooler You can change the default printer by several methods: The current user account will have an entry in the Windows registry. Look at the key HKEY_USERS\.DEFAULT\Print. More usefull for me was that I could use the Windows features MMC to change the default printer. You can change the default printer by browsing to the printer in the device manager. Another solution is to edit the EERD in the Windows Registry but this one is not for the average user and requires some technical skills. I think the solution that will come to most users is to use the user account and the MMC method. To start here is an example of how to change the default printer using the user profile. Create a new user on the computer. Use the MMC to open the Group policy editor. Open User Configuration and click the printer section. Click User Configuration (logon) and select the profile you created to create the new user account. Click the right arrow and select Change and click OK. DEFSET Free [Latest-2022]

DEFSET is a small utility application that enables users to modify the default printer. It is designed for Windows XP, Vista, and 7 and is compatible with multiple printer drivers, such as HP Laserjet, Canon, Brother, Xerox, Epson, Dell, Lexmark, Nikon, Sharp, Xerox, etc. While the focus is on PCs, it is also meant for business environments, where those computers use various types of printers from different vendors. Seems like a nice little program, but frankly, I don't think i'd go to the extra trouble of setting up a profile for each user, if each person's system is capable of picking a different default printer every time. I use DEFSET to change the default printer from a networked printer. Its not as easy or quick as it could be to set though. I leave the default alone, then just select a printer from the networked server and set it as default. Seems like a nice little program, but frankly, I don't think i'd go to the extra trouble of setting up a profile for each user, if each person's system is capable of picking a different default printer every time. The main reason for setting up a profile is for easy printing access when you do not have access to the printer or are away from it. This is where DEFSET fits in very well. SEILZER and ROBIN F. make several good points. If you frequently change printers when using various applications on your computer, it's impossible to perform the operations quickly since it means accessing the settings panel to pick a printer instead of going with the default choice. For this scenario, you can turn to DEFSET. It's a simple-to-use and straightforward program that gives you the possibility to rapidly modify the default printer used by your computer. Change the default system printer with ease You don't have to go through an installation procedure to be able to use this tool. It's only necessary to unzip the downloaded archive and double-click the.exe in order to reach the main window right away. Thanks to this, DEFSET can be kept on a USB flash drive to be able to run it on any PC directly, without having to install or even copy it onto the hard drive. When it comes to the interface, DEFSET opts for a small-sized window that only lists a dropdown menu for picking the default printer, along with two
